

IronKleen Bore Stain Remover is designed to remove iron and bore water stains from surfaces like walls, driveways, and fences. Here's the best way to use it effectively on walls:

Materials Needed:

1. IronKleen Bore Stain Remover
2. Spray bottle or garden sprayer
3. broom (for stubborn stains)
4. Hose or pressure washer
5. Gloves & safety glasses (for protection)

Step-by-Step Application:

1. Prepare the Surface

- If the wall is dusty or dirty, give it a quick rinse with water to remove loose debris.

2. Dilute (if necessary)

- Check the instructions and dilute with water if required. 1 lt IronKleen to 200 ml water max dilution

3. Apply the Solution

- Spray the IronKleen solution directly onto the stained area using a spray bottle or garden sprayer.
- Make sure the surface is evenly covered.

4. Let it Sit

- Allow the solution to work for 5–10 minutes (or as per the instructions). **Avoid letting it dry completely.**

5. Scrubbing won't be needed

- For stubborn stains, gently apply a second coat of IronKleen with a brush or broom.

6. Rinse Thoroughly

- Use a hose or pressure washer to rinse the wall well.
- If stains persist, repeat the process.

Extra Tips:

- Apply on a cool, overcast day or in the early morning/evening to prevent quick evaporation.
- If cleaning near plants, wet them first and rinse afterward to minimize chemical absorption.
- Test a small hidden area first to ensure it doesn't affect the surface color.
